RE: CTS Rapid Set Concrete Pour, Friday the 20<sup>th</sup> February 2009

To whom it may concern

Dear Sirs,

The Manildra Group employed the services of Volumetric Concrete Australia to perform maintenance repairs to specific areas of a concrete driveway located at the Auburn Facility in February 2009. In all there were four (4) areas to be replaced.

The project involved approximately 4m<sup>3</sup> concrete to be replaced under specific restrictions.

- No disruption to forklift traffic during replacement
- Area was to be back in operation after a maximum of six (6) hours working time and ready for the busy loading period.
- Afternoon pour after 3.00pm
- All demolition material to be removed from site

VCA successfully complete all facets and requirements as stated above with the desired outcomes. The project was completed in a timely manner with resumption to normal traffic earlier than expected, five (5) hours.

The area was successfully re-instated back into operation prior to the next hectic loading period.

The Manildra Group thoroughly recommends the services that Volumetric Concrete Australia provides and will be utilizing the Concrete Repair System in the near future at a number of our depots.

Please contact the undersigned if you would like to discuss the project.

Regards,

Jason Davis
