Thursday 29th April 2010

To Whom It May Concern,

I have had the pleasure in using the CTS Rapid Set Cement Products, Wunderfix and Cement All over the past months.

Cement All has easily been the best product I have ever used for this type of application, where I have managed to fix negative falls before waterproof and tiling and have achieved thicknesses from 0 to 100mm and there has not been one sign of cracking or drumming and have had the benefit of working on the new surface within 30 minutes, as well as the benefit of having the choice of using the additives to assist in turning the product into a multi purpose product.

Wunderfix has also been the best product I have ever used for it's type of application. I have used it to feather out balcony soffits where the formwork ply has left an uneven surface at the joints. The painter simply grinds the joints then applies the Wunderfix approximately 300mm wide to feather out the joint and remarkably he is sanding and painting the soffit within 1 hour leaving a fantastic finish.

I am really ecstatic about the remarkable products that have been introduced to me by CTS Rapid Set Cement so far and really look forward to using the whole product range when the correct application arises.

I have no hesitation in recommending CTS Rapid Set Cement to anyone who is serious about speed and quality in the Construction Industry and welcome anyone who would like to contact me in person to discuss any of the above.

Regards,

Joe Sassen
